

Timberline Middle School Report Card

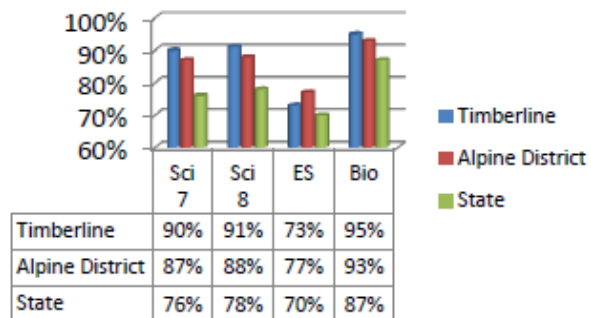

Language Arts CRT Proficiency 2013

Mathematics CRT Proficiency 2013

Science CRT Proficiency 2013

TIMBERLINE GROWTH SCORES

The State recently announced a grade for each school in Utah based on last year's test results. Timberline received a "B" grade. This grade is calculated using both proficiency and growth scores in Math, Science and Language Arts. For several years, over 90% of Timberline students have reached proficiency in these three areas. This commendable achievement is a reflection of the continued effort of our amazing staff and students.

Growth scores are a new standard of measurement and when measuring growth, Timberline scored in the 60th percentile. Growth is measured individually, and calculated by the growth each student makes in a one year period of time when compared to other students with similar baseline test result patterns.

We are not discouraged by this new criterion. In fact, the measurement of growth and our desire to improve our growth scores has given us a worthy goal. Each department is currently working on creating common assessments. Each question asked in those assessments will be directly tied to a state standard. As teachers review data gathered from these formative and summative assessments, they will work as collaborative teams to improve instruction and ensure not only high levels of proficiency but also significant levels of growth for each student.
